Skills

Programming & Tools: Python, SQL, R, Visualization tools (Google Looker Studio, Tableau)
Frameworks: PyTorch, TensorFlow, OpenCV, Pandas, NumPy, Matplotlib, Seaborn
Languages: English (Limited working proficiency), Thai (Native)

Experience

Smart System Solution - SCG Group
Operation Data Analyst

Bangkok, Thailand Aug 2025 – Present

- Extracted and transformed large-scale operational data using **Google BigQuery** and **Python**, and built automated dashboards in **Looker Studio** to track KPIs on service provider performance, demand fulfillment, and supply-demand gaps for cross-functional stakeholders.
- Developed internal workflow applications using **AppSheet** and **Google Apps Script** to automate data collection, validation, and reporting processes, reducing manual effort and enabling the Supply team to identify bottlenecks and drive operational improvements in real time.

NXPO
Data Analyst

Bangkok, Thailand Feb 2025 – Jul 2025

- Conducted end-to-end data collection, cleaning, and analysis using **Python** on large datasets independently, uncovering trends and correlations that informed research and policy improvements.
- Designed and developed comprehensive **Google Looker Studio** dashboards and presentations, delivering data-driven recommendations that enhanced operational efficiency and overall performance.

ZTRUS
AI Engineer, Contract

Bangkok, Thailand Nov 2024 – Jan 2025

- Acting as a full-time and owner for an AI-driven OCR document-based system, ensuring the development and delivery align with business goals and technical specifications.
- Leveraged **Python** to design, develop, and integrate proprietary **OCR technology**, delivering scalable and efficient solutions for document processing and automated data extraction.
- Improved processing accuracy and performance, streamlining workflows and reducing manual intervention.

Education

Thammasat University
Master of Science, Data Science

Bangkok, Thailand
Aug 2022 – May 2024

- *Courses Highlights:* Data Mining Algorithms; Advanced Python for Data Science; Data Exploration; Data Preprocessing
- *Thesis:* “**Application of Artificial Intelligence in Studying Technical Indicators Related to Various Industrial Groups of the Thai Stock Market**” – developed a predictive model using Python and LSTM networks to analyze and forecast market trends.

Kasetsart University
Bachelor of Science, Nuclear Science

Bangkok, Thailand
Aug 2015 – May 2019

- *Courses Highlights:* Principal of Statistical; Calculus I; Calculus II; Mathematics for Nuclear Science (Calculus III)

Projects

- **Chatbot RAG-based with Web Crawling** ([Link](#)): Developed a Thai question-answering web application using Retrieval-Augmented Generation (RAG), with automated web crawling to collect and index up-to-date information from various Thai-language websites.
- **AI Influencer Matcher LLM-based** ([Link](#)): A Streamlit-based web application that leverages Ollama’s LLaMA 3.2 and BGE-M3 to perform dynamic brand website analysis with category detection and bilingual (Thai/English) keyword generation for TikTok influencer matching.
- **Symptom Recommendation System** ([Link](#)): Built a Streamlit web app that lets healthcare providers pick patient symptoms, automatically asks clear follow-up questions (e.g., duration, severity, location).
- **Face Detection Using YOLOv8**: Developed a high-precision face detection system by fine-tuning the advanced YOLOv8 algorithm on a curated dataset of 3,283 images. This project involved enhancing the model’s detection accuracy through extensive pre-processing and augmentation techniques. The system was rigorously tested across varied conditions to ensure robustness and reliability, using Python, OpenCV and YOLO framework.
